

Fund Objective

The State Street International Value Spotlight Fund seeks to provide long-term growth of capital.

Process

The Fund's management team uses a proprietary fundamental research-based process to identify companies where it believes there is a dislocation between the value of a company and the price of its equity securities, utilizing a proprietary integrated suite of security-specific financial analyses and valuation tools to analyze and model relevant aspects of a company's operational and financial performance in order to arrive at an estimate of the intrinsic value of a security. After identifying a universe of such companies, the team selects for investment those companies that it believes represent the optimal combination of long-term value and quality.

Under normal circumstances, the Fund will invest at least 80% of its net assets (plus borrowings, if any, for investment purposes) in securities of non-U.S. issuers, which may include issuers from both developed and emerging markets countries. The team considers a company to be a non-U.S. issuer if (i) it is organized outside the United States or maintains a principal place of business outside the United States; (ii) its securities are traded principally outside the United States; or (iii) during its most recent fiscal year, it derived at least 50% of its revenues or profits from goods produced or sold, investments made, or services performed outside the United States or it has at least 50% of its assets outside the United States.

Important Risk Information:

Foreign investments involve greater risks than U.S. investments, including political and economic risks and the risk of currency fluctuations, all of which may be magnified in **emerging markets**.

Value stocks can perform differently from the market as a whole. They can remain undervalued by the market for long periods of time.

Non-diversified funds that focus on a relatively small number of securities tend to be more volatile than diversified funds and the market as a whole.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.
