

Fund Objective

The State Street Small/Mid Cap Equity Index Fund seeks to provide investment results that, before expenses, correspond generally to the total return of an index that tracks the performance of mid to small capitalization exchange traded U.S. equity securities.

Process

The Fund seeks to achieve its investment objective by investing substantially all of its investable assets in the State Street Small/Mid Cap Equity Index Portfolio ("the Portfolio"), a separate series of the State Street Institutional Investment Trust, with an identical investment objective as the Fund and that has substantially similar investment policies, strategies and risks, to the Fund. Under normal market conditions, the Portfolio invests at least 80% of its net assets (plus borrowings, if any) in stocks in the Index. The Portfolio is not managed according to traditional methods of "active" investment management, which involve the buying and selling of securities based upon economic, financial and market analysis and investment judgment. Instead, the Portfolio, using a "passive" or "indexing" investment approach, seeks to provide investment results that, before expenses, correspond generally to the total return of the Index.

Important Risk Information:

Derivative investments may involve risks such as potential illiquidity of the markets and additional risk of loss of principal.

These investments may have difficulty in liquidating an investment position without taking a significant discount from current market value, which can be a significant problem with certain **lightly traded securities**.

Investments in **small-sized, mid-sized and micro-cap companies** may involve greater risks than in those of larger, better known companies.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

Passively managed funds hold a range of securities that, in the aggregate, approximates the full Index in terms of key risk factors and other characteristics. This may cause the fund to experience tracking errors relative to performance of the index.
