State Street Global Advisors One Iron Street, Boston, MA 02210.
T: +1 617 786 3000.

* The gross expense ratio is the fund's total annual operating expense ratio. It is gross of any fee waivers or expense reimbursements.

** The net expense ratio is the fund's total annual operating expense ratio after fee waivers or reimbursements.

Important Risk Information

Fee waivers and reimbursements can be found in the funds' most recent prospectuses.

Gross expense ratio and net expense ratio can be found in the funds' most recent prospectus.

Funds investing a single sector may be subject to more volatility than funds investing in a diverse group of sectors.

Small company issues can be subject to increased volatility and considerable price fluctuations.

Investments in small-sized companies may involve greater risks than in those of larger, better known companies. Returns on investments in stocks of small companies could trail the returns on investments in stocks of larger companies.

Value stocks can perform differently from the market as a whole. They can remain undervalued by the market for long periods of time.

Investing in foreign domiciled securities may involve risk of capital loss from unfavorable fluctuation in currency values, withholding taxes, from differences in generally accepted accounting principles or from economic or political instability in other nations.

Investments in emerging or developing markets may be more volatile and less liquid than investing in developed markets and may involve exposure to economic structures that are generally less diverse and mature and to political systems which have less stability than those of more developed countries.

REIT funds may be subject to a high degree of market risk due to lack of industry diversification. REIT funds may be subject to other risks including, but not limited to, changes in real estate values or economic conditions, credit risk and interest rate fluctuations and changes in the value of the underlying property owned by the trust and defaults by borrowers.

Actively managed funds do not seek to replicate the performance of a specified index.

Some of the funds are actively managed and may underperform its benchmarks. An investment in the Fund is not appropriate for all investors and is not intended to be a complete investment program. Investing in the strategy/Fund involves risks, including the risk that investors may receive little or no return on the investment or that investors may lose part or even all of the investment.

Non-diversified funds that focus on a relatively small number of stocks tend to be more volatile than diversified funds and the market as a whole.

Investing in futures is highly risky. Futures positions are considered highly leveraged because the initial margins are significantly smaller than the cash value of the contracts. The smaller the value of the margin in comparison to the cash value of the futures contract, the higher the leverage. There are a number of risks associated with futures investing including but not limited to counterparty credit risk, currency risk, derivatives risk, foreign issuer exposure risk, sector concentration risk, leveraging and liquidity risks.

Bonds generally present less short-term risk and volatility than stocks, but contain interest rate risk (as interest rates rise bond prices usually fall); issuer default risk; issuer credit risk; liquidity risk; and inflation risk. These effects are usually pronounced for longer-term securities. Any fixed income security sold or redeemed prior to maturity may be subject to a substantial gain or loss.

Investments in mortgage securities are subject to prepayment risk, which can limit the potential for gain during a declining interest rate environment and increase the potential for loss in a rising interest rate environment.

Investing in high yield fixed income securities, otherwise known as "junk bonds", is considered speculative and involves greater risk of loss of principal and interest than investing in investment grade fixed income securities. These Lower-quality debt securities involve greater risk of default or price changes due to potential changes in the credit quality of the issuer.

Equity securities may fluctuate in value in response to the activities of individual companies and general market and economic conditions.

SSGA Target Date Fund are designed for investors expecting to retire around the year indicated in each fund's name. When choosing a Fund, investors should consider whether they anticipate retiring significantly earlier or later than age 65 even if such investors retire on or near a fund's approximate target date. There may be other considerations relevant to fund selection and investors should select the fund that best meets their individual circumstances and investment goals. The funds' asset allocation strategy becomes increasingly conservative as it approaches the target date and beyond. The investment risks of each Fund change over time as its asset allocation changes.

The performance and risks of each SSGA Target Retirement Fund and the SSGA Target Retirement Income Fund will directly correspond to the performance and risks of the underlying funds in which it invests and in proportion to each Fund's allocation to each of these underlying funds. By investing in many underlying funds, the SSGA Target Retirement Funds and Target Retirement Income Fund have exposure to the risks of many different areas of the market.
